

The automatic drain valve can be attached to filter or filter regulators instead of a manual drain valve or semi-automatic drain valve, as the insert is suitable for $\varnothing 14$ for attachment.

It can be mounted at any time on vessels with G 1/8 socket thread.

When a certain condensate level is reached, a pneumatic servo valve is actuated by the float and the drain valve is opened. After a short blow-out, the valve closes again. Manual override is achieved by pushing in the horizontally protruding pin.

max. Operating pressure	12 bar
Operating temperature	0°C to 90°C
Minimum Operating pressure	~ 4 bar (Closed at lower pressures)
Mounting position	Vertical down
Condensate passage	DN 4
Manual override	Push pin inwards (difficult to move above 6 bar)
Condensate drain	G 1/4 female thread

Automatic drain valve
